I am a final-year software engineering student with strong experience in artificial intelligence and immersive technologies. I have developed AI-powered tools, virtual reality systems, web platforms, and mobile applications. My main research interests include computer vision, deep learning with PyTorch, and interactive digital twins using Unreal Engine

EXPERIENCE

Digital Twin for product design | project with NETINFO & Visteon (09.2025-present)

AI Engineering Intern

- Designed and implemented a virtual reality digital twin of the Porsche production process and simulated complex manufacturing workflows and machinery behavior using Unreal Engine
- Keywords: **Unreal engine, C++, VR**

Transformer Design smart calculator | SACEM Industries (08.2025)

AI Software development Intern

- Developed a smart calculator for transformer design that automates key parameter computations and streamlines engineering workflows
- Reduced manual engineering efforts by automating **transformer design calculations**
- Keywords: **Nextjs, Postgresql, FastApi, Python**

Virtual Reality LLM | CGI Studio (06.2025-08.2025)

Game developer Intern

- Created an AI-powered gamified VR environment where users interact via text or voice
- Keywords: **Unity, c#, blender, flask, FastAPI, Whisper**

Administration Managing system | Project with ISIMM University Administratio (11.2024-04.2025)

- Developed a full-stack HR **management system** for handling administrative tasks at ISIMM
- currently used** by the university to handle and centralize administrative tasks
- Keywords: **nextjs , expressjs , Docker**

Data conversion and extraction tool | Ozeol company (07.2024-09.2024)

Ai Engineering Intern

- Built an automated tool to convert **PDF, Word, images, and CSV files into Excel** formats
- enhanced dynamic file conversion, data extraction, and organization processes
- Keywords: **Python, OpenPyXL, PaddleOCR**

EDUCATION

Software Engineering at ISIMM, Monastir, Tunisia (2023-present)

- Focus: Software development, AI, web & mobile applications, and data-driven solutions

Computer Science Preparatory Cycle at ISIMM, Monastir, Tunisia (2021-2023)

- Focus on mathematics, physics, and computer science, including programming (C, C++, Python), algorithms data structures, and problem-solving techniques

LANGUAGES AND SKILLS

Databases: SQL, MySQL, PostgreSQL, MongoDB

Web & Mobile Development: React.js, Next.js, FastAPI, Express.js, react-native

Programming Languages: Python, C, C++, Java, R, C#

Cloud & DevOps: Amazon Web Services (AWS), Docker, Docker-Compose, GIT , GitHub , GitLab, Diversion

Python Libraries & Frameworks: Beautiful Soup, NumPy, SciPy, Pandas, Scikit-Learn, PyTorch, TensorFlow, Keras

Game Development & 3D Modeling: Unity, Unreal Engine, Blender

EXTRACURRICULAR ACTIVITIES

Vice Chair, CPU Club ISIMM branch

(2024-2025)

- Led and organized robotics competition ISIMMCYBERBOT V4.0
- Led and organized Hackathons and problem solving competitions
- Organized workshops in C++, ReactJs, ExpressJs

Hackathons Achievements

(2023 – 2025)

- **Code of Duty** –GDSC EPI & IEEE EPI | 05.2024
- **AI Wave Hackathon** – GDG Sousse | 04.2024 and 04.2025
- **AI NIGHT Hackathon** – ARSII Tunisie | 03.2024
- **IEEEEXTREME** – IEEE ISIMM | 11.2023
